CHAPTER 301 Definitions

301.38 INTERSECTION.

“Intersection” means:

(a) The area embraced within the prolongation or connection of the lateral curb lines, or, if none, the lateral boundary lines of the roadways of two highways that join one another at, or approximately at, right angles, or the area within which vehicles traveling upon different highways that join at any other angle might come into conflict. The junction of an alley, driveway, or site roadway open to public travel with a public roadway or highway does not constitute an intersection, unless the public roadway or highway at the junction is controlled by a traffic control device.

(b) If a highway includes two roadways separated by a median, then every crossing of each roadway of such divided highway by an intersecting highway constitutes a separate intersection if the opposing left-turn paths cross and there is sufficient interior storage for the design vehicle. As used in this division, “design vehicle” means the longest vehicle authorized under Ohio R.C. 5577.05 to operate on that roadway without a permit.

(c) At a location controlled by a highway traffic signal, regardless of the distance between the separate intersections as described in subsection (b) of this definition:

(1) If a stop line, yield line, or crosswalk has not been designated on the roadway within the median between the separate intersections, the two intersections and the roadway and median constitute one intersection.

(2) Where a stop line, yield line, or crosswalk is designated on the roadway on the intersection approach, the area within the crosswalk and any area beyond the designated stop line or yield line constitute part of the intersection.

(3) Where a crosswalk is designated on a roadway on the departure from the intersection, the intersection includes the area that extends to the far side of the crosswalk. (ORC 4511.01(KK))
